Command Pattern

Dynamische Teamerstellung

```
/// <summary>
/// Erstellt alle Teams anhand des SkillLevel des Spielers
/// </summary>
/// <param name="competitorList">Liste aller Spieler</param>
/// <returns>Liste aller Teams</returns>
2 Verweise | sWIFjoschw, vor 2 Tagen | 1 Autor, 3 Änderungen | 1 Arbeitselement
public List<Team> CreateAllTeamsBySkill(List<ICompetitor> competitorList)
    competitorList.Sort();
    int size = competitorList.Count - 1;
    int amountTeams = competitorList.Count / 2;
    List<Team> teamList = new List<Team>(amountTeams);
    for (int index = 0; index < amountTeams; index++)</pre>
        //Der beste wird mit dem schlechtesten in ein Team gesteckt
        teamList.Add(new Team(competitorList.ElementAt(index), competitorList.ElementAt(size--)));
    return teamList;
```

Kryptokomponente

```
1-Verweis | Christopher Heid, vor 14 Tagen | 1 Autor, 1 Änderung
public static string Hash(string password, int iterations)
    //"Salz" erstellen
    byte[] salt;
    new RNGCryptoServiceProvider().GetBytes(salt = new byte[SaltSize]);
    //Hash erstellen
    var pbkdf2 = new Rfc2898DeriveBytes(password, salt, iterations);
    var hash = pbkdf2.GetBytes(HashSize);
    //Hash und Salz kombinierne
    var hashBytes = new byte[SaltSize + HashSize];
    Array.Copy(salt, 0, hashBytes, 0, SaltSize);
    Array.Copy(hash, 0, hashBytes, SaltSize, HashSize);
    //Hash zu 64BaseString konvertirenren
    var base64Hash = Convert.ToBase64String(hashBytes);
    //Hash formatieren
    return string.Format("$KICKERCUP$PW${0}${1}", iterations, base64Hash);
```

Boolean Converter

Rangliste Dienstagsturnier

Spieler	Siege	Rang
Melina Hilligardt	2	Sieger
August von Gordon	2	Sieger
Johannes Schweer	0	
Laura Griemsmann	0	

```
